ABOUT

Since 1943 Reisoğlu Marble is Turkey's one of the leading natural stone production company. Our company, which produces marble, travertine, granite, onyx, limestone, andesite, and basalt, also provides services in many other fields such as quarry operations, manufacturing, imports, and exports. As Efesus Stone is a worldwide renowned brand in Natural Stone, Quartz, and Porcelain market, it fulfills the need of National and International architects and designers effectively in their construction projects.

MARMARA WHITE MARBLE QUARRY

MARMARA WHITE MARBLE QUARRY

As Reisoğlu Marble, we have been producing Afyon white marble in our own quarry, Afyon white marble quarry since 1943. The blocks extracted from our Afyon white marble quarry are both available in the domestic market and exported, and in our production facilities as cut-to-size products or slabs of desired thickness (2-3 cm). We have different selections of afyon white marbles that we produce from our Afyon white marble quarries and we have a wide range of products in the extracted marbles.

In the white marbles extracted from our Afyon white marble quarry; We have Afyon white arcobaleno, Afyon white marble A la vogue, Afyon white marble golden gray, Afyon white marble crystal and Afyon sugar marble options. Our marbles, which are extracted from the same Afyon white marble quarry, are of first class quality, and are extracted in completely environmentally friendly conditions by taking the necessary safety precautions.

Marbles obtained from our Afyon white marble quarry are used for interior and exterior cladding of buildings, upholstery slabs, kitchen countertops, stair steps, paledyen etc. Marbles obtained from our Afyon white marble quarry are used for interior and exterior cladding of buildings, upholstery slabs, kitchen countertops, stair steps, paledyen etc. While they are used in the construction industry, rubble and wedge-sized marbles are processed in our cnc and waterjet workshops and used in the production of souvenirs (vase, clock, pen holder, nameplate, etc.).

We offer the best service by bringing our marbles extracted from our Afyon white marble quarry, in your projects, in every corner of your home, in the decorative products you wish, to our valued customers.

SILVER TRAVERTINE QUARRY

Onyx

SILVER TRAVERTINE QUARRY

We extract our silver travertines from our Emirdag quarries in Afyon. Silver travertines; Unlike marble types, since it naturally contains fine crystals, it has a softer and pasty texture when touched. Horizontal vein images in silver travertine varieties bring more elegant visuals and different expressions to decoration areas. Travertines are chemical sedimentary rocks in the composition of calcium carbonate (CaCO_3). They occur as a result of the precipitation of calcium carbonate in groundwater under certain conditions. This precipitation forms travertines with soft lines over time. Conditions involved in precipitation; conditions such as evaporation, decrease in the amount of carbon dioxide (CO_2) contained in the water, decrease in the pressure on the water. Gray travertine has areas of use such as steps, flooring, coatings, sinks, mosaics, etc. Silver travertine products are compatible with black marbles, white marbles, and basalt etc. products, and basalt pedestal basin or countertop construction on a bathroom coating made of silver travertine will look very elegant. In addition, gray travertines can be combined with anthracite and black marble mosaics. Silver basin or basalt washbasin and tumbled mosaic or split face mosaic can be considered as back wall covering. Travertines can be thought of as a kind of marble, but it differs from marble with its unique porous structure. These voids in Silver Travertine are caused by the gases trapped inside during its formation and then released. Silver travertine is considered to be too porous to be suitable for flooring and cladding. Silver travertine can provide a great integrity in areas by applying it in dark or light tones. On the other hand, silver travertine tiles are the most popular and preferred natural stone tiles in natural stone flooring.

WHITE TRAVERTINE QUARRY

Our construction machines working in the white travertine quarry in Denizli extract the white travertine blocks and serve them to the factory and the sector. Our company supplies white travertine in quarries both domestically and abroad.

Travertine – Consists of Calcium Carbonate (CaCO_3), and is technically a carbonate rock; It occurs around hot springs and in caves. Groundwater containing calcium bicarbonate, rich in minerals, hot under hydrostatic pressure, loses pressure when it rises to the surface through a crack or reaches a cave-like cavity. The dissolved CO_2 in these waters is released into the atmosphere (just like the foaming of a shaken soda when the lid is opened) and solid calcite precipitates, thus forming the Denizli Travertines.

Travertine and marbles can be considered as a kind of marble, but it differs from marble with its unique porous structure. These cavities in travertine are caused by the gases trapped inside during its formation and then released. Marble and natural stone tiles come in a variety of colors, from dark brown to almost white to beige. Sometimes there are veins of different colors on the surface. It appears as a unique color fluctuation on each tile. It is generally considered to be too porous, making it unsuitable for flooring and cladding. On the other hand, its tiles are the most popular and preferred natural stone tiles in natural stone flooring. It is highly preferred due to its unique appearance resulting from the way marble and natural stone are formed.

Denizli Travertine, a kind of beige travertine from Turkey, is widely used in bathroom, wall cladding, counter top, shower, cut-to-size stone, flooring housing etc. widely used in the fields. white travertine; It is also known as Denizli Travertine. It can also be called Denizli Classic Medium, Denizli Light Travertine, Denizli Classic light, Medium Travertine Denizli, Denizli Travertine Vein Cut, Denizli Travertine Cross Cut.
